

Daniel Manzela

Founding AI Product Builder

Email: danielq1603@gmail.com · LinkedIn: <https://linkedin.com/in/manzela> · GitHub: <https://github.com/Manzela> · Portfolio: <https://manzela.github.io/Manzela>
Open to relocation

SUMMARY

Built TNG Shopper from scratch: an autonomous multi-agent content pipeline that today publishes around 10.5M product detail pages per month for 11 enterprise retailers across 5 countries, at a unit cost of roughly \$0.0006 per page. The first 18 months covered fundraising, customer signing, and production rollout. Outside TNG: author of Antigravity-OS, an open-source governance kernel for AI agents shipped on PyPI; named inventor on 15 patent claims covering physical-context retail AI.

SKILLS

Languages: Python

LLMs & GenAI: Vertex AI, Google ADK, Gemma 4 26B-A4B-it MoE, Multi-LoRA, vLLM, Model Context Protocol (MCP)

Agents & evaluation: O-R-A-V framework (Observe / Reason / Act / Validate), Pydantic, Langfuse, CrewAI

Infrastructure & data: Modal serverless, BigQuery, Firestore, Redis, Cloudflare CDN, Open Policy Agent (OPA)

AI-search web: WordPress multisite (Sage 10), JSON-LD with SpeakableSpecification, llms.txt, AI-bot-aware robots.txt, Bing IndexNow

EXPERIENCE

TNG Shopper — Founding AI Product Builder

2024 – Present

Verification: <https://manzela.github.io/pipeline-observatory/> · <https://youtu.be/czZsPbyIC1M> · <https://github.com/Manzela/WP-Multisite>

Co-founded the company and led product engineering across three production lines plus one R&D product line.

- Built the production content pipeline as a 7-node multi-agent DAG on Vertex AI, running Gemma 4 26B-A4B-it MoE through vLLM with per-tenant Multi-LoRA adapters on Modal. Pydantic schemas at every node boundary, Open Policy Agent (OPA) for the safety gates, Langfuse for execution tracing, Redis for the work queue, Firestore for state, and BigQuery for analytics. The pipeline publishes ~10.5M product detail pages per month at ~\$0.0006/page, with a 68.9% O-R-A-V pass rate (Observe, Reason, Act, Validate). Built with one colleague; ~74% of commits over 18 months are mine.
- Shipped the customer-facing SaaS platform end-to-end as sole engineer, from ideation to production in under a month. Onboarding and analytics surface for 11 enterprise retailers across Spain, Portugal, Israel, the US, and Mexico (234 managed websites). Demo video above.
- Led a team of three on the WordPress multisite CMS layer — Sage 10 with a custom `sunrise.php` for dynamic global blog resolution, a 1,056-line JSON-LD schema generator with Schema.org SpeakableSpecification, AI-bot-aware `robots.txt` (explicit ALLOW for OAI-SearchBot, ChatGPT-User, PerplexityBot, ClaudeBot, Applebot, Amazonbot, DuckAssistBot), `llms.txt` generator, Cloudflare CDN, and Bing IndexNow integration. Public blueprint: <https://github.com/Manzela/WP-Multisite>
- Drove the Elysium research line (2024 – 2025): an 11-agent orchestration that fused search intent, Uber H3 geo-indexing, and foot-traffic signals into store-level demand forecasts for retail. Validated across 13 enterprise brands covering 15,600+ store locations. 15 patent claims (3 independent, 12 dependent). Status: paused; folded back into TNG's main pipeline. <https://manzela.github.io/Manzela/elysium/>

Funding and traction: \$500K raised from top-tier angel investors. \$118K collected ARR, \$223K Booked ARR, \$1.53M Contracted ARR pipeline from existing live and signed enterprise clients. Top-100 retail-tech startups of 2025.

Tasko.AI (by Hasherut) — AI Product Engineer

Oct 2020 – Dec 2023

Verification: <https://manzela.github.io/Manzela/tasko-ai/>

Built a WhatsApp-native AI assistant that handled real-world errands for paying clients — a production agentic system before the industry had a name for the architecture. Trained on 21M+ WhatsApp messages and nine years of conversation history; recognised 1,561 unique action-verb intents routed through a four-layer pipeline (Classify → Retrieve → Execute → Verify). 21,102 ML-labelled tasks, 153 unique paying clients, 145 procedures, 97 distinct workflows. Built the pipeline end-to-end; designed the labelling ontology and ran the labelling team.

Seller App — Co-founder CEO / Product Leader

Jan 2020 – Apr 2024

Verification: <https://manzela.github.io/Manzela/seller-app/>

Bootstrapped for four years with an ex-founder of Amazon Go and Alexa Shopping. Camera-first onboarding tool that turned retail stockrooms into online storefronts. Three computer-vision generations — barcode, image, then video with retrieval-augmented generation over a 60M+ canonical SKU catalog. Reached \$10K MRR at plateau, from SMB customers.

Eitam Finance — Solo Data-Mining Engineer

Feb 2019 – Jul 2020

Verification: <https://manzela.github.io/Manzela/data-mining/>

Built a five-stage lead-finding pipeline (scrape → structure → classify → enrich → score) for an Israeli wealth-management firm. Generated ₪50M+ in new Assets Under Management over the engagement.

Earlier engagements — Solo Contractor

Sept 2016 – 2019

Verification: <https://manzela.github.io/Manzela/junior-years/>

Three years of seasonal freelance: web development, offline-to-online inventory imports, spreadsheet automations, and market research for three startups and two non-tech businesses.

PERSONAL PROJECTS

- **Antigravity-OS** (PyPI: [ag-os](#)) — open-source governance kernel for autonomous AI systems. 9-rule Constitution, Cost Guard, SQLite-WAL Flight Recorder, Dreaming Module, MCP server. MIT-licensed.
- **AutonomousAgent** — 24/7 Mixture-of-Experts agent orchestration that improves over time with reinforcement learning. Production deployment of [hermes-agent](#) with tiered sandboxing, OpenTelemetry observability, sops-encrypted secrets, and a phased path to Vertex AI + Atropos RL training.
- **Atelier** — Mixture-of-Design-Experts agent orchestration built for the Google AI Agents Hackathon. Apache-2.0.
